Dexis-classic 1shot Platinum / Original

DEXIS holders are the preferred choice for a large number of Henry Schein dental clients.

Fits:

- Original DEXIS sensor;
- Platinum DEXIS sensor.

Aligns the x-ray tube in 3 planes.

Two models is all you need for all intra oral routine x-ray images, including bitewings (BW), periapicals(PAs), and endodontic images with reamers and rubber dam in place.

There are only 2 models in the Dexis 1shotdental holder system - horizontal and vertical.

The Dexis horizontal sensor model is ideal for routine bitewing (HBW) images, but it can also take periapical(PA) views especially wisdom tooth views, or PAs (for PAs slide the imaging device up or down in the 1shot claw and also adjust the x-ray tube to suit) and endodontic shots of the posterior/buccal teeth with reamers and rubber dam in place, where the 1shotdental holder can be hand - finger/thumb held on the tooth.

The Dexis vertical sensor model, takes vertical bitewings (VBW), and will take all anterior and posterior (PA) views,-

- and also endodontic images with reamers and rubber dam in place, where the 1shotdental holder can be hand - finger/thumb held on the tooth.

The Dexis 1shotdental pack provides you with 8 digital x-ray holders. You can choose the most suitable option:

PRICE: US\$158.00
